Occupant injuries in motor vehicle accidents

Cellular telephones must not be used when normal railway radio communications are available. The study evaluated 2-point and 3-point seat belts using crash test dummies that were representative of small-, medium- and large-sized people.

Aviation Investigation Report A08P0125

When a signal indication displayed red, the stop was enforced after the signal was passed. At 0955:22, the collective was further reduced to 34% torque and the pitch was increased to approximately 6 degrees nose up. Consequently, the Board authorized the release of this report on 17 November 2009.

Encyclopedia of Forensic and Legal Medicine

The rebuild did not include the installation of an in-cab voice recorder. To share some of his own experiences with other pilots, he wrote an article on helicopter icing that was published in Transport Canada's TC Aviation Safety Letter. This wide-nose locomotive is configured with the short hood leading.

Vehicle and Occupant Factors that Determine Occupant Injury

In one example where this practice was identified, it resulted in an EASA recommendation that individual operators develop their own memory items in accordance with their operating philosophy.
