## 2.3 Existence and Uniqueness of Solutions of Nonlinear Equations

Some options are absent from the optimoptions display. For optimset, the name is FinDiffType. Practice these problems, and practice, practice, practice! This will guarantee that both functions are continuous everywhere in each interval.

### Solve system of nonlinear equations

The Algorithm option specifies a preference for which algorithm to use. The next theorem gives sufficient conditions for existence and uniqueness of solutions of initial value problems for first order nonlinear differential equations. Instead, create options in your code.

## 6. Algebraic Solution of Non

For custom plot functions, pass function handles.

### Solving Trigonometric Equations

The circle and ellipse are tangent to each other, and intersect at exactly one point. Generally, elimination is a far simpler method when the system involves only two equations in two variables a two-by-two system, rather than a three-by-three system, as there are fewer steps. The recommended way to update an option is to use optimoptions, not dot notation.

### Analytic theory of differential equations

MaxPCGIter Maximum number of PCG preconditioned conjugate gradient iterations, a positive scalar.
