**Full text of naturalis**

The best represented 50 out of the 87 species living above 2200 m, or more than 57% is the large family Phalangidae. The increase in the number of cases of observations of the Marbled polecat in the period from before 1990 to the recent years is difficult to be evaluated in terms of statistical reliability and might be due to the insufficient number of answers. Eusphalerium alpinum Heer България: Рила, Пирин 2100-2600 т.
