Critical theory and social inequality

This responsibility does not end by saying what we see or get to know in the world, but requires that we reach an agreement regarding the norms we want to follow in order to live together in this world. The statement achieves more truth by including more empirical cases, more areas of research and more methods, especially if it integrates similar research in different contexts and theoretical traditions.

The truth — or in our case, what the most appropriate curriculum is for our children — will not be defined according to an objective model in which only the rationality of the expert is taken into account. Since this is a relatively recent and unsettled debate, through this example we can see Critical Theory in the making.

Horkheimer saw the dividing line between traditional and critical theory essentially in sociological terms: his criterion was whether the theory assisted the reproduction of society or subverted it. Similarly, Kathy Gibson and Julie Graham writing as Gibson-Graham 1996 called for new directions in Marxist geography based on their reinterpretations of contemporary feminist, postmodernist, and poststructuralist theory. Another way in which this point about democratic legitimacy can be made is to distinguish the various uses to which practical reason may be put in various forms of discourse.
