Theory of international trade : a dual, general equilibrium approach

Member: National Academy of Sciences, American Economic Association vice president 2002, president 2008, Indian Econometric Society Mahalanobis International medal 1985, American Academy Arts and Sciences economics membership panel chair, 1999-2000, member nominating committee 2001-2003. This book expounds trade theory emphasizing that a trading equilibrium is general rather than partial, and is often best modelled using dual or envelope functions. It exploits an analogy with the theory of options in financial markets, which permits a much richer dynamic framework than was possible with the traditional theory of investment.
