Quaternary ecology : a paleoecological perspective in SearchWorks catalog

Examples of extinctions over longer periods of time are readily documented within the fossil record, with the loss of whole families evident between Eocene and modern times Morley, 2000, 2007. The increasing interest during recent years in vegetation history, long-term climatic changes and the development of biotic communities has resulted in a growth of the literature in this field and has provided an incentive for scientists to use palaeo-ecology concepts to clarify contemporary ecological issues. Literature emphasizing the contributions of paleoecology to contemporary issues in ecology is growing, but many of the key papers are published in journals not traditionally read by ecologists.

Quaternary ecology : a paleoecological perspective in SearchWorks catalog

The book provides an integrated overview of this interdisciplinary area. It is extraordinarily valuable to overseas Quaternary scientists who are not steeped in all the details of glacial deposits in Great Britain and Ireland and who otherwise would lack an overview guide and introduction to a complex subject. With this book, we hope to bridge the communication gap between Quaternary ecologists and other ecologists.

Quaternary Tropical Plant Extinction: A Paleoecological Perspective from the Neotropics

The book provides an integrated overview of this interdisciplinary area. In this book we do not attempt to cover the subject of Quaternary ecology in a traditional textbook presentation.

DENTON Department of Geological Sciences and Institute for Quaternary Studies University of Maine Boardman Hall Orono Maine 04469-0111

10 USA Glacial Deposits in Great Britain and Ireland IS 580 pages long and is organised into three major sections: glacial events revealed by glacial deposits; glacial deposits in critical regions; and specific topics concerning glacial deposits. Examples from the palaeo-ecological literature demonstrate how quaternary ecology interfaces with other branches of ecology, including plant demography, ecological genetics, limnology and landscape ecology.
