## How the Moon Formed: Violent Cosmic Crash Theory Gets Double Boost

There is about 2800 years of documented measurement for the tidal dissipation rate parameter today, extrapolating back billions of years runs into problems.

## Surprise! Earth and the moon aren't made of exactly the same stuff.

However, in the 2nd century BC, correctly theorized that were due to the attraction of the Moon, and that their height depends on the Moon's position relative to the.

## New model explains the moon's weird orbit: Simulations suggest a dramatic history for the Earth

Facts and observatios are not the same thing at all.

## Difference Between Earth and Moon

The dust stays above the Moon approximately 10 minutes, taking 5 minutes to rise, and 5 minutes to fall.

## NASA

The proto-moon and evolving Moon over long time integration, has a very different orbital period too compared to the present. Philosophers and argued that the full moon induced insanity in susceptible individuals, believing that the brain, which is mostly water, must be affected by the Moon and its power over the tides, but the Moon's gravity is too slight to affect any single person.
