## The Link Between OCD and Major Depressive Disorder

There is evidence that patients who respond to lithium stabilization have primarily features of the classical manic-depressive illness, such as an episodically relapsing-remitting disease course, no psychiatric comorbidity, and a positive family history. The resulting findings have been published and presented between 1970 and 2009 Duffy et al. Lamotrigine showed a small but significant improvement in depressive symptoms compared with placebo in a pooled analysis of 5 acute randomized controlled trials, but 4 of these 5 studies were underpowered and failed to show a superiority of lamotrigine over placebo.
