Pork production: How to choose a breed and select sows

C When the goal is an improvement in percentage lean boars B and E would be expected to produce the greatest improvement but A, C, and G would also improve leanness. Seedstock suppliers can use EPDs and indexes for pricing. But remember, the difference in genetic merit between the boars is the same regardless.

Texas Pork Producers Association

Pigs Herds Days EPD Acc. The success of a pig production business depends on selecting the correct breed.

Home Page

The actual EPD values of boars A and B change dramatically with changes in base.

Home Page

Commercial producers should require seedstock suppliers to follow a sound genetic improvement program and then use genetic information when purchasing breeding animals along with acceptable health, reproductive soundness, and skeletal structure.

Home Page

The majority of the producers were using at least some home-raised replacement gilts. What Does NPPC do for Pork Producers? Most offspring will be marketed on a carcass merit program, some gilts will be retained. Genetic trend within a particular breed is also important.

A Survey of Breeding and Selection Practices Among Hawaii, Illinois, and Iowa Pork Producers

Low accuracy values are caused by very few pieces of information on the animal being evaluated or by low heritability for a given trait.

USE OF SIRE SUMMARIES IN ESTABLISHING BREEDING SYSTEMS

EPDs can also be used as a decision making tool when planning breeding programs in both seedstock and commercial herds. Accuracy values are usually reported for each EPD. PRIORITIES: Your packer has said you must improve percentage lean.
