Electromagnetic compatibility

The antenna has a small size.

Engineering Physics (CC 110011) Common for all Engineering Branches 9780071072823, 0071072829

However, conventional photoconductive channels exhibited rather slow responses to external light pulses because the photogenerated electrons and holes survive for a rather long time even after the lights are turned off.

Optoelectronic Materials and Devices II

This optical nanofocus is ideal for plasmonic sensing.

19th Congress of the International Commission for Optics: Optics for the Quality of Life

In any real laser cavity, some photons are always lost for many various reasons. Here we describe two factors that deeply modify those properties, viz.

Radio Frequency, Band and Spectrum

Metasurfaces are an attractive alternative to three-dimensional metamaterials because of their simplicity and relative ease of 66 3.
