Abalone (all species)

The person on the line told her if she hung up personal details and intimate photos would be leaked to her employer. Size and Weight Commonly 50-100cm and 1-7kg, but can grow to 14kg and 120cm. Most of these areas are subject to additional rules.

Bag and size limits

The fish will often swim free of the weight as it re-compresses, otherwise a sharp lift should dislodge the barbless hook so that the release weight can be retrieved.

Fishing limits

Macquaria novemaculeata adults move downstream into estuaries to spawn in water of suitable salinity.

Australian fish species

Notes : Fast aggressive fish with lots of sharp teeth. WA Distribution Found from the Exmouth Gulf in the north to the South Australian border in the south.
