### IUCN Red List of Threatened Species definition

The Red List is set upon precise criteria to evaluate the risk of thousands of species and subspecies. With its strong scientific base, the IUCN Red List is recognised as the most authoritative guide to the status of biological diversity.

### Species

To date, more than 128,500 species have been assessed for The IUCN Red List.

### List of endangered animals in India

Far more than a list of species and their status, it is a powerful tool to inform and catalyze action for biodiversity conservation and policy change, critical to protecting the natural resources we need to survive. All definitions are referenced, where possible preference has been given to internationally recognised definitions for example those defined by international conventions or agreements.

### 1986 IUCN red list of threatened animals (eBook, 1986) [tools.github.ffxiv.cn]

Major species assessors include , the the research division of the , the , and many Specialist Groups within the SSC. It is likely that many undescribed or unassessed species of plants, animals, and other organisms have become or are in the process of becoming extinct. The categories used in the Singapore Red Data Book are based on those used by the for the.

### Lists of IUCN Red List near threatened species

Here's of some of the plants and animals, currently only marine ones.

### Species

IUCN provides technical expertise for conservation issues and projects. As well as assessing newly recognized species, the IUCN Red List also re-assesses the status of some existing species, sometimes with positive stories to tell. More detailed explanations are provided for a number of key terms, to provide further background information.
