## Build A Simple Wireless Bluetooth Stereo Audio System For The Outdoors

You can find more great projects and techniques from David Picciuto at. While entire books have been devoted to this phenomenon, you only need a rudimentary knowledge of sound design to make your own simple speakers. The final circuit design is shown below.

## DIY

The subject of polyfill can be complex, just know that it helps to fuse the waveforms inside the box for a better and bigger sound, and for the cherry on top, our corner protectors, and some rubber feet. The pins are so small that I didn't even notice until later.

## Build a Wooden Passive Speaker for Smart Phone or Tablet

To create this article, 30 people, some anonymous, worked to edit and improve it over time.

## Building Your Own Speaker Enclosures ...

Pull the power jack through its hole and nut it on the inside.

## A linear Speaker Array you can build

This helps load down the source and eliminate noise.
