Analysis of thermalphysic processes in near

By comparison of the results obtained, it is established that at the selected calculation conditions the optimization of the sequence of thermal modernization makes it possible to ensure an additional savings up to 8,53%.

The massively parallel computer system MBC

Snizhenie teplopoter' poverkhnosti za radiatornoi stenki. The zero approximation and first approximation models are written in explicit form. The authors hypothesize on formation of geophysical ecotone and present the procedure for evaluating ecological indicators of the ecotone as applied to underground mineral mining.

Analysis of thermalphysic processes in near

Indoor air quality in buildings constructed in cold climates, and its impact on health, education and productivity of people. Thus, the whole variety of possible variants of inter-influence of heat-conducting inclusions is covered. Sher Effect of irregular structure of a compressed blocky rock mass on propagation of a hydrofracture is analyzed in the limit case when biaxial compression field is hydrostatic.

Publishing company «Building materials»

The critical displacements of roof rocks that make stage-wise roof bolting impossible are calculated. Radon permeability of heavy concrete.
