Chemical Constitution of Crude Oil

Well-explained topics and concepts, and varied styles of numerical questions in this book make it a one-stop solutions for JEE preparation of Physical Chemistry. Among all these three chemical bonds the strongest bond is covalent bond and weaker from covalent bond is ionic bond and weakest among all is polar bond. The very similar and relatively high electronegativities of Au and S rule out any significant metallic or ionic character. The main condition for a covalent bond to be formed is that both atoms forming covalent bond should have equal electro negativity or nearly equal electro negativity. Thus, the most stable configuration of nuclei and electrons is one in which the electrons spend more time between nuclei, than anywhere else in space.
