External Resources and Economic Growth: An Empirical Analysis of South Asian Countries in: Zagreb International Review of Economics and Business Volume 21 Issue 2 (2018)

STR has been mainly used for evidencing asymmetries in economic variables; some leading empirical applications deal with interest rates, unemployment or exchange rates, among other variables. As observed in the secondary education case, there is wide variation in the estimated transition functions. That is, increasing educational levels might not necessarily be associated with higher economic growth in Spain.

Education and economic growth: an empirical analysis of nonlinearities

FEDEA and BBVA Research, Estudios sobre la Economía Española no. A possible cause may be the importance traditionally attributed in Spain to the pursuit of a university degree.

External Resources and Economic Growth: An Empirical Analysis of South Asian Countries in: Zagreb International Review of Economics and Business Volume 21 Issue 2 (2018)

Their work conditions are especially severe, often not providing the stimulation for proper physical and mental development. The results provide evidence of a positive relationship between economic growth and innovation.

Innovation and Economic Growth: An Empirical Analysis for CEE Countries

Eds , International Encyclopedia of Education, Vol. Education improves this ability and so absorptive capacity can explain why a nonlinear relationship between education and growth might be expected, i.

How Can Public Spending Help You Grow? An Empirical Analysis for Developing Countries

The Quarterly Journal of Economics, 110, 1127-1171.
