## Nevada Bureau of Mines and Geology

The absence of even one component could have reduced or eliminated the chance of forming an epithermal mineral deposit. A few kilometers northeast of Midas, modest easterly dips on 15.

## Late Cenozoic paleogeographic evolution of northeastern Nevada: Evidence from the sedimentary basins

The basin in its early stages extended to the southeast across the northern Nevada rift and connected with the Ivanhoe basin near Midas. The north-striking Getchell normal fault truncates the northeast end of this block. The only layer of this map that has been spatially edited the boundaries of the polygons themselves have been altered in some cases, and new polygons have been created is the geology polygon layer NevadaGeology.

□□□□□□>□□□□>□□□□□□

Soil horizons in sandstone beds above the contact indicate a change from lacustrine to terrestrial environments. On the western side of the basin, a mixed fluvial and lacustrine environment persisted until after 14.

## Carlin/Pete/Lantern Mine (MRDS #10270827) AU

The property is in high, sagebrush covered desert, and the climate favorable for year-round mining. Rhyolite and andesite flow units and domes were emplaced between ca. The claims carry with them the surface rights for mining.

## Distribution of minor elements in the Rodeo Creek NE and Welches Canyon quadrangles, Eureka County, Nevada

It corresponds to the unit Ta3 on the 1978 State map. Food and Wood Products Branch. This rock is overlain by eZq.

**Distribution of minor elements in the Rodeo Creek NE and Welches Canyon quadrangles, Eureka County, Nevada**

Rocks mapped as the Ely Springs Dolomite are included with the Eureka Quartzite in southern Nye County.
