Introduction to the Theory of Flow Machines

The coagulation factors are generally serine proteases enzymes.

Cascade position control of a single pneumatic artificial muscle

Smooth muscle in the vessel wall goes through intense contractions that constrict the vessel.

Hemostasis

At first asymptotic behavior of transonic flow past the G-K shock free airfoil was examined.

Introduction to the Theory of Flow Machines

This hysteresis causes energy loss and the area of the hysteresis loop is dependent on the amplitude of the motion and on the underlying causes of the hysteresis phenomenon.
