Violence and aggression in psychiatric inpatient care in Sweden: a critical incident technique analysis of staff descriptions

What am I supposed to say? Chile: an ongoing mental health revolution. A survey of role stress, coping and health in Australian and New Zealand hospital nurses. *International Journal of Mental Health Nursing*; 26: 5, 461-471.

Interventions to improve discharge from acute adult mental health inpatient care to the community: systematic review and narrative synthesis

All had worked as staff within a period of five years of data collection. Staff sometimes told them to go to their rooms if there was a risk of violence.

Openness in the NHS: a secondary longitudinal analysis of national staff and patient surveys

Slade M et al 2014 Uses and abuses of recovery. Independent inquiry into care provided by mid Staffordshire NHS Foundation Trust January 2005—March 2009, vol. Complete listings of all studies and quality appraisal scores are presented in Additional file.

The psychological impact of restraint in acute mental health settings: the experiences of staff and inpatients

Results Our search resulted in a total of 64 publications that matched our inclusion criteria. The next steps include working closely with community teams to help them engage in the pathway, reviewing progress to see if the process can be further streamlined, and where technology can better assist. For example letters, telephone, face-to-face and video.

nurses' experiences of patient violence on acute care psychiatric inpatient units: an interpretive descriptive study

This literature is predominantly related to the prediction, prevention, and management of aggressive incidents.

The mental health of nurses in acute teaching hospital settings: a cross

One thousand six hundred sixty-two unique papers were identified; 1542 papers were excluded after screening and 120 full papers were reviewed. As prevention measures moved along the continuum of primary to secondary strategies, the focus shifted from individual nurse strategies to the adoption of a team approach to manage or prevent patient violence. The sessions are reactive: what is discussed is directly fed back to participants.

nurses' experiences of patient violence on acute care psychiatric inpatient units: an interpretive descriptive study

This method also allowed us to uncover patterns of nursing care — or to begin to understand how different contextual conditions might influence how a nurse responds to patient violence. VP is a social worker and Ph. The DPC excerpts described degrees of positive experiences more often than the acute ward + I Positive experience: 24.
