In this special edition of River Monsters, Jeremy relives the biggest and most surprising catches of his career, right in America's backyard. This is the principal species captured by the artisanal fishery in the Itaipu Reservoir.

Tropical Rivers

A good deal of gold and platinum are washed out of the small streams that form a network in the surrounding country.

Breeding the Red

When they have accumulated a small quantity of the fine, sparkling flakes they embark in their canoes and make their way to the seaport in three days, there to do their trading.

How I hooked a deadly piranha

Malarial and yellow fevers are endemic among the natives, but quickly sap the vitality and life of newcomers into the region; rain falls daily—four hundred inches being the average precipitation for one year—and the heat is so intense that when the sun appears during the intervals between showers the whole jungle is converted into a steaming inferno. All authors felt that existing regulations could address many of the problems of environmental degradation, but that enforcement needs to be improved and that public education is an essential element in effecting that improvement.

Breeding the Red

Next, Jeremy investigates the Xiphactinus, and catches a sailfish in the Indian Ocean as a reminder of the speed of this massive meat-eating fish. When Sunday came, and with it the gathering of people always present when market is held, we had no trouble in engaging the required peons, each of whom agreed to carry a pack of seventy-five pounds.
