

Water markets in the Fordwah/eastern Sadiqia area - an answer to perceived deficiencies in canal water supplies?

International Irrigation Management Institute - Water markets in the Fordwah/Eastern Sadiqia area: an answer to perceived deficiencies in canal water supplies?

Hydraulic		
Water duty	Low	High
Canal supplies	Constant flow	Varying flow
Control	Supply-oriented	Demand-oriented
Agriculture		
Intensity	Low	High
Seasons	One-to-one	Two-to-three
Crops	Low water demanding	High water demanding
Management		
Water	Planned scarcity	Planned sufficiency
Cropping pattern	Prescribed/controlled	Free
Socio-Economic		
Objectives	Poverty alleviation	Agriculture growth
Benefits	Spread	Concentrated
Optimization of	Unit of water	Unit of land
Labour	Family labor	Hired labor
Orientation	Subsistence	Market

The lacking aspects of this type of comparison are relative perspectives, localized nature of the socio-economic needs and cost-effectiveness of the management arrangements.

2.1.1 Water Delivery Policy and Irrigation Network

A simple input-output diagram of an irrigation conveyance system is shown below in Figure 1 (Rao, P.S. and A. Sarda, 1985: Managing Main System Water Distributors). The water released from a diversion (reservoir, barrage or main canal) to an irrigation system is processed through a combination of physical and non-physical factors, which are labelled as hardware and software, before it reaches a field. The water delivered to Box C is influenced by the original quantity in Box A and by the inter-linked influences of the components in Box B.
