Given this ideal situation, Galileo asked how this ball would move on the plane, and the logical conclusion is that the ball would keep moving without an external mover if space were infinite. . Briefly, whereas Streumer argues that we cannot have reason to do what we are unable to do, Heuer argues that we can have reason to do what we are unable to.

Consequently, it is shown that the existence and uniqueness of self-adjoint extensions of symmetric operators in quantum mechanics have important implications for philosophical issues. Such a specification is necessary for the purpose of determining whether a reason R , the recognition of which depends on accounting for α , can legitimately be ascribed to P .
