## Menopause

Most women experience some physical or emotional symptoms when they reach menopause, which is typically in their early fifties, though it can occur at any age between 35 and 59. When menopause is diagnosed before age 40, it is considered to be abnormal or premature menopause. Estrogen and Progestin Combinations - Patches Estrogen type Progestin type Brand Name Product Strength estradiol levonorgestrel 0.

## Menopause

If you are having symptoms commonly associated with the menopausal transition, your doctor may ask questions about your age, symptoms, and family history to determine if it really is the menopausal transition causing your symptoms. Menopause that occurs at 40 or younger is considered. How long do menopause symptoms last? These symptoms can be a sign that the ovaries are producing less estrogen, or a sign of increased fluctuation ups and downs in hormone levels.

## Stages of Menopause

Although you no longer have periods, your ovaries still release eggs and produce estrogen and progesterone. During the menopausal transition, the body's production of estrogen and progesterone, two hormones made by the ovaries, varies greatly. The test result sometimes will detect early osteoporosis.

## What Is Menopause?

Anyone who has concerns about these changes should seek medical advice. Early or premature menopause may be induced if the are surgically removed for example, in a or in treatment of ovarian cancer or incidentally damaged or destroyed as a side effect of or chemotherapy. Some may decide to talk with their doctor about treatments for their symptoms.

## Menopause

Toward menopause, the levels of the hormones estrogen and progesterone in the body fall because they are no longer necessary to support reproduction. Sex may be uncomfortable or painful. The question may seem irrelevant, but it is helpful to know the date of your last period, not

only so that you can respond to symptoms in the most appropriate way, but also for contraceptive purposes.

### **Menopause Symptoms That May Surprise You**

This can lead to , a condition that causes bones to become weak and break easily. Around menopause, various physical and mental can occur, causing symptoms. Menopause is when you have not had a period for 12 consecutive months.

### **Menopause: Symptoms, causes, and treatments**

Irregular menstruation The first sign that menopause is approaching is usually periods occurring less regularly.

### **Menopause Information from [tools.github.com](https://tools.github.com)**

However, if there are medications or medical conditions that may affect periods, it can be more difficult to know the specific stage of the menopause transition. However, evidence has shown that there are some risks associated with the use of these medicines.
