CESs participate in the decomposition and metabolism of endogenous and exogenous compounds, which can greatly affect the metabolism of esters, mainly including hCE-1 and hCE-2. Sedasys failed to gain popularity and adoption for the following reasons: 1 the device was programmed to only decrease the sedation depth propofol dose but not to increase it, 2 the dosing schedule was not efficient for the fast pace and turnover of most diagnostic upper GI endoscopic procedures, and 3 the device failed to satisfy both patients and providers, limited by the FDA approval for no more than moderate sedation. RECENT advances in anaesthesia and analgesia , including oxygen therapy.
