One exceptions is Valetudo, in green, a prograde-moving body that's far out. The Jamieson family and friends and UA astronomers dedicated the John Jamieson Telescope at ceremonies on the 9,160-foot summit of Mount Lemmon on Oct. The feat would not have been possible until recent years, says Sam Deen, another amateur astronomer who helped Ly and has done recovery work of his own.

Amateur Astronomer Finds “Lost” Moons of Jupiter

Clyde Foster inside his observatory in Centurion, South Africa exterior inset. . Hanauer, who first attended a UA adult astronomy camp in 2001, is helping spearhead development of the 25-acre Mount Lemmon observing site into a financially self-sustaining world-class science education and research center.

Amateur Astronomer Finds “Lost” Moons of Jupiter

Using this construction method makes the typical Dobsonian telescope large, portable, inexpensive, very stable, and easy to manufacture. Image processors have done a wonderful job combining the images, with often spectacular results. That data suggests the little moon is part of the compact Carme group of irregular moons.
