## Office types and workers' cognitive vs affective evaluations from a noise perspective

Both obesity and negative affect had independent and negative associations with cardiovascular reactivity, such that reduced stress responses were apparent for obese adolescents and those with high levels of negative affect.

## Problems in Measuring the Degree of Implementation of an Innovation [microform] / William J. Gephart

To this end, participants were categorized as working in cellular offices if they indicated that they worked alone in an office, whereas they were classified as working in shared-room offices in case they stated that they shared an office with one or two colleagues.

## Clinical evaluation of the affective domain

Data was collected with two instruments: Quality of Life Questionnaire C30 and Breast Cancer Module BR23. Data collected in this research was analyzed by two ways analysis of variance with unequal cells using 5% of significance level. All four mutations were missense mutations affecting the SAND domain of DEAF1.

## Problems in Measuring the Degree of Implementation of an Innovation [microform] / William J. Gephart

To test this hypothesis, we are conducting two parallel screens for mutations that affect either the induction or the anterior-posterior patterning of the zebrafish heart. The optimal management strategy of obese patients with end-stage heart and lung failure remains controversial.

## Clinical evaluation of the affective domain

We evaluated cross-sectional and 5-year associations between positive affect and health behaviors in patients with coronary heart disease CHD. The total heritability was estimated as 0. Defects affecting the right ventricle often cause right ventricular volume or pressure overload and affected

patients are at high risk for complications such as heart failure and sudden death.
