Global Biodiversity Outlook 5

Despite progress to conserve nature and implement policies, the Report also finds that global goals for conserving and sustainably using nature and achieving sustainability cannot be met by current trajectories, and goals for 2030 and beyond may only be achieved through transformative changes across economic, social, political and technological factors. In urban areas, the Report highlights, among others: promotion of nature-based solutions; increasing access to urban services and a healthy urban environment for low-income communities; improving access to green spaces; sustainable production and consumption and ecological connectivity within urban spaces, particularly with native species. In marine systems, the Report highlights, among others: ecosystem-based approaches to fisheries management; spatial planning; effective quotas; marine protected areas; protecting and managing key marine biodiversity areas; reducing run-off pollution into oceans and working closely with producers and consumers.

Media Release: Nature's Dangerous Decline 'Unprecedented'; Species Extinction Rates 'Accelerating'

Global Biodiversity Outlook GBO is the flagship publication of the Convention on Biological Diversity CBD. To read more about people data and diversity, see pages 17-24 of the. Taking an integrated approach: In agriculture, the Report emphasizes, among others: promoting good agricultural and agroecological practices; multifunctional landscape planning which simultaneously provides food security, livelihood opportunities, maintenance of species and ecological functions and cross-sectoral integrated management.

Global Biodiversity Outlook 5

Indigenous Peoples, Local Communities and Nature At least a quarter of the global land area is traditionally owned, managed, used or occupied by Indigenous Peoples. By transformative change, we mean a fundamental, system-wide reorganization across technological, economic and social factors, including paradigms, goals and values. Current negative trends in biodiversity and ecosystems will undermine progress towards 80% 35 out of 44 of the assessed targets of the Sustainable Development Goals, related to poverty, hunger, health, water, cities, climate, oceans and land SDGs 1, 2, 3, 6, 11, 13, 14 and 15.

Diversity management that works: summary of recommendations

The numbers of invasive alien species per country have risen by about 70% since 1970, across the 21 countries with detailed records. The national reports provide rich information about the steps taken in countries worldwide in support of biodiversity conservation, sustainable use, and the fair and equitable sharing of benefits.

Media Release: Nature's Dangerous Decline 'Unprecedented'; Species Extinction Rates 'Accelerating'

It is a periodic report that summarizes the latest data on the status and trends of biodiversity and draws conclusions relevant to the further implementation of the Convention.
