But this privilege is a social disgrace, and often the male pays with his life for his futility and partial independence. The competition involved is an important phenomenon, and it occurs in most species. The lining of the uterus becomes thickened and glandular and full of blood vessels, forming in the womb a cradle to receive the fertilised egg. Motionless, the egg waits; in contrast the sperm — free, slender, agile — typifies the impatience and the restlessness of existence. Throughout history, maternity has been both worshipped and reviled: the mother both brings life and heralds death.

Simone De Beauvoir's The Second Sex

In 1879 the penetration of the spermatozoan into the starfish egg was observed, and thereupon the equivalence of the nuclei of the two gametes, egg and sperm, was established. This is the understanding that the individual woman should be able to decide her own fate. To be able to appreciate this b k it is vital to understand the backdrop as well as the philosophy associated with the author.
