To achieve these goals, the Engineering Research Program supports about one hundred and ten research projects covering a wide spectrum of topics cutting across traditional engineering disciplines with a focus on the following three areas: 1 mechanical sciences, 2 control systems and instrumentation, and 3 engineering data and analysis.

Proceedings of the seventh symposium on energy engineering sciences: Nonlinear mechanics and mechanical systems (Conference)

Thermal measurements of the heat capacities and sensible enthalpies of the hexagonal A-type lanthanide sesquioxides of La, Ce, Pr, and Nd are reviewed and re-evaluated in terms of the lattice heat-capacity parameters and the Schottky levels obtained from lattice-sum calculations and analyses of the optical spectra.

Symposium on Thermophysical Properties

Finally, we thank the members of the local organizing committee: Diana Attila, Thomas Budinger, Joe Chew, Daniel Chivers, Rob Johnson, Laurie O'Brien, Donna Raziano, Emily Sause, and Brian Wirth for doing all the work that actually made this conference happen.

These measurements give the pressure, temperature, volume, enthalpy, electrical resistivity, and sound velocity as fundamental quantities.

The topic, scope, and style of the presentations should fit the broad audience of these sessions.
