Movietone was one of four motion picture sound systems under development in the U. Consequently, the Wall machine shop in was asked to rebuild this camera and the results were much improved. The current standard for is +21 frames for optical, but a 46-foot theatre reduces this to +20 frames; this was originally done partly to ensure the film runs smoothly past the sound head, but also to ensure that no Phonofilm could again be played in theaters — the Phonofilm system being incompatible with Case Research Lab specifications — and also to ease the modification of projectors already widely in use.

Movietone sound system

However, Fox used the system until 1939, because of the ease of transporting the single-system's sound film equipment. .

Movietone News films are in the collections of 20th-Century Fox and the at Columbia, including the only known footage of Earl I. The sensitivity, though less than that of instruments of the moving-coil type, is higher than that of other moving-iron instruments, while it possesses the qualities of sturdiness, quick responsiveness, and freedom from the effects of.

Spectrophotoelectric sensitivity of thalofide (1920 edition)

Individual works may require securing other permissions from the original copyright holder. Sponable did little to establish the record of Case Research Lab inventions, other than his April 1947 article in The Journal of the SMPE.
