List of British Rail TOPS depot codes

Following a ten-yearly overhaul the locomotive returned to service in Summer 2019, outshopped in unlined BR green.

Railways

I believe the twenty foot containers have been used to carry rock salt moved as a block load with pairs of containers carried on bogie FLA wagons and the thirty foot long 'Russell' type containers have also been used to carry other products, including beetroot for Baxter's from Ely and animal foods. The use of TOPS codes for SPs was somewhat haphazard, with Machynlleth code MN hosting one or two locomotives on some weekends while , which had no TOPS code, stabled more than a dozen locos.

Shirebrook diesel depot

Wagons fitted with end-doors could be tipped up using a section of hinged track and in some locations wagons with only side doors were emptied by opening the side door and tipping the wagon over sideways. Because of the degree of work needed to restore it as a tank locomotive, and because a small tender locomotive was thought to be more useful on the lengthy railway, it was decided in 2000 to convert it to the mooted 2-6-0 design. Come the sunrise, the final curtain call for steam stood in the yard in all its majesty, reflecting the early morning sunlight.

List of British Railways shed codes

The later type of container is dark grey and has the firms name in blue on a vertical white patch toward the left hand end of the container.

British Railways Motive Power Depots Steam Shed Code Official Booklet 1958

The British Rail Class 44 or Sulzer Type 4 diesel locomotives were built by British Railways' Derby Works between 1959 and 1960, intended for express passenger services.

Andover railway station : definition of Andover railway station and synonyms of Andover railway station (English)

They continued to be built after the 'grouping' of 1923 by the until 1941 by which time 772 had been built. Essentially they remained at these locations until their withdrawals began in 1980. An interesting inclusion was the Class 48, an improved Brush Type 4 that never materialised.

Hither Green Depot: 73C

Listed here are the building dates: From new the Deltics were allocated to three depots; Finsbury Park in North London, Gateshead in the North East and Edinburgh Haymarket in Scotland. It should be noted that the sub-sheds had variable status and, in latter years particularly, may have served only as stabling or signing-on points. As a result, the north end of Devons Road, adjoining , was changed into a pedestrian area and renamed Stroudley Walk in honour of the great locomotive engineer.
