

Assessment of the bottom fauna and sediments of the western basin of Lake Erie, 1979

Ontario Ministry of the Environment - Bulk Upload Issues

Description: -

-

Low-dimensional topology.

Loop spaces.

Employee-management relations in government -- United States

Labor unions -- Government employees -- United States

United States. -- Social Security Administration -- Employees

Missions -- Canada.

Presbyterian Church -- Canada -- Missions.

Water quality management -- Great Lakes Region.

Water quality -- Erie, Lake.

Water -- Pollution -- Great Lakes Region.

Sediment transport.

River sediments.

Pollutants.assessment of the bottom fauna and sediments of the western basin of Lake Erie, 1979

Effects of Tubificid Oligochaetes on Physical and Chemical Properties of Lake Erie Sediments

Dreissena polymorpha in the Saginaw Bay, Lake Huron ecosystem: overview and perspective. The Mississippi River and the Lake Ontario basin comprise its native freshwater range in the United States Page and Burr 1991, Scott and Crossman 1973.

Publications: NOAA Great Lakes Environmental Research Laboratory

Recession for at least the last 560 years has been estimated at 1 to 1. Although no lake in the Eastern Corn Belt Plains ECBP ecoregion of Indiana and Ohio will look like the oligotrophic lakes of the Northern Lakes and Forests ecoregion of Minnesota, Wisconsin, and Michigan, it is important to recognize that the various ecoregions were defined based on existing land use conditions and that intensive row crop farming is not the native condition of land in the ECBP.

Checking the Pulse of Lake Erie on JSTOR

Major categories of stresses include excessive eutrophication from nutrient and organic matter loadings; siltation from inadequate erosion control in agricultural, construction, logging, and mining activities; introduction of exotic species; acidification from atmospheric sources and acid mine drainage; and contamination by toxic or potentially toxic metals such as mercury and organic compounds such as polychlorinated biphenyls PCBs and pesticides. Journal of Water Pollution Control Federation 51:1694-1708 1979.

Characterization of sedimentary phosphorus in Lake Erie and on

I tried uploading 6 records and only one was successfully uploaded. Internal P loading may not contribute to HABs in the western basin, but it can cause and maintain hypoxia in the central basin and delay the recovery of lake water quality for a lengthy time period in response to external P reduction measures.
