## Periphyton: ecology, exploitation and management — Research@WUR

The ecology part focuses on periphyton structure and function in natural systems. Multi-disciplinary in nature, it covers both basic and applied aspects of periphyton, and is applicable worldwide in natural, extensive and intensive managed systems.

E-ZBorrow is the easiest and fastest way to get the book you want ebooks unavailable.

### Staff View: Periphyton :

The exploitation part covers its nutritive qualities and utilization by organisms, particularly in aquaculture. The book provides an international review of periphyton ecology, exploitation and management.

### Periphyton : Ecology, Exploitation and Management (2005, Hardcover) for sale online

Lake production was dominated by phytoplankton, which followed seasonal changes in temperature. For Librarians: Integration of your institutional LibKey profile with CAB Direct is very quick and easy! The exploitation part covers its nutritive qualities and utilization by organisms, particularly in aquaculture.

### Periphyton: Ecology, Exploitation and Management

The exploitation part covers its nutritive qualities and utilization by organisms, particularly in aquaculture. Want to get more out of the basic search box? Thus the periphyton community comprises bacteria, fungi, protozoa, algae, zooplankton and other invertebrates. Tags: LEADER 03135pam a22003494a 4500 001 693113 005 20060426114428.

### **Phytoplankton and periphyton production and its relation to temperature in a humic lagoon**

After an introductory review of the topic, papers discuss periphyton structure, diversity, and colonization; dynamics and influencing factors, role in the aquatic ecosystem and food webs, and periphyton in freshwater lakes and wetlands. Thus the periphyton community comprises bacteria, fungi, protozoa, algae, zooplankton and other invertebrates.

#### **Staff View: Periphyton :**

Thus the periphyton community comprises bacteria, fungi, protozoa, algae, zooplankton and other invertebrates. Periphyton is important for various reasons: as a major contributor to carbon fixation and nutrient cycling in aquatic ecosystems; as an important source of food in aquatic systems; as an indicator of environmental change.
