for Quebec.

### XXX SOLD XXX Steel hilt early hanger from the era of the American Revolutionary war Ref 9514

No bayonet was provided with the rifle, giving the soldiers a major disadvantage in close combat. But mathematical calculations were only a part of the science of artillery, which is worth a web page all to itself, so let's begin.

### Weapons of the American Revolution

The fort was finished in January, 1809, and named for North Carolina Revolutionary War hero Colonel Andrew Hampton. United States Muskets, Rifles and Carbines. The sloping striped maple stock supports a minimum of abbreviated components, which suggests early wartime production.

### **American Rifleman**

This design also allowed a constant ratio of air space to powder, which in turn meant mathematical predictability of ballistics from one shot to the next. A History of the Three Pound Verbruggen Gun and Its Use in North America 1775-1783 Tucker, Spencer C.

### **REVOLUTIONARY WAR DAGGER**

Sighting was simplicity itself - a line would be scored or painted down the center surface of the barrel, parallel with the central axis of the bore. This would be aligned with the target by use of a plumb line. The bayonet was a 15 inch long, spade type blade used for hand to hand combat.
