Geography of Saskatchewan

While not seen in figure 10 the Battle Creek valley begins on the north side of the West Cypress Hills upland surface and provides evidence of still an additional through valley crossing the high upland region.

The Encyclopedia of Saskatchewan

The research project is interpreting evidence in the context of a previously unexplored deep glacial erosion paradigm, which is fundamentally different from most commonly accepted North American glacial history interpretations. At that time the region north of the Cypress Hills was at least as high as the present 1240 meter high Cypress Hills upland surface today and the deep through valleys on either side had yet to be eroded. Swift Current Creek is not labeled in figure 7, but flows in a north-northeast direction from the northeast corner of map 72F10 across the southeast corner of map 72F15 into map 72F16 and then to the figure 7 east edge north half.

Saskatchewan Maps & Facts

Douglas and Howard Palmer eds. At that point the ice-marginal meltwater floods began to flow in east and northeast directions to move onto the ice sheet surface and to join giant supra-glacial melt water rivers.

Saskatchewan Maps & Facts

Once in Saskatchewan the South Saskatchewan River flows in an east and southeast direction before turning to flow in a northeast, north-northwest, and northeast direction and eventually the water reaches Hudson Bay.
