### HIPAA: A guide to the basics of implementation

The ability of a recipient of information to identify an individual i. Some of the methods described below have been reviewed by the Federal Committee on Statistical Methodology, which was referenced in the original preamble guidance to the Privacy Rule de-identification standard and recently revised. Identifying Characteristic A characteristic may be anything that distinguishes an individual and allows for identification.

### Smartsheet and HIPAA Compliance

In this case, specific values are replaced with equally specific, but different, values.

### Privacy

Covered entities will need to have an expert examine whether future releases of the data to the same recipient e.

### The Use of Technology and HIPAA Compliance

Satisfying either method would demonstrate that a covered entity has met the standard in §164. The Census Bureau will not be producing data files containing U. This means that over half of U.

Of course, de-identification leads to information loss which may limit the usefulness of the resulting health information in certain circumstances. This figure illustrates a situation in which the records in a data set are not a proper subset of the population for whom identified information is known.

### Privacy

In instances when population statistics are unavailable or unknown, the expert may calculate and rely on the statistics derived from the data set.
