The digitized maps are linked to each other, to relevant source texts, and to illustrations of the locations as they appeared at the time or at present.

**Isotopic age measurements on the Limpopo orogenic belt, Southern Africa**

E This layer-cake stratigraphy is subjected to penetrative shearing and associated thinning within a shear zone, here speculated to be contractional.

**Geology of Britain viewer**

This pre-Sinclair complex consists of isolated occurrences of metamorphosed igneous and sedimentary rocks grouped into the eastern Kumbis Complex Watters, 1976 and its probable western equivalent, the Kairab Complex Hoal, 1989, Hoal, 1990 , which is intruded by the Aunis tonalite. Sheet explanations give a concise account of a geological sheet district in the form of an A5 sized booklet. Surprisingly, this transition is very sharp, which indicates that magmas must be focused from a broad area at depth to create an abrupt shallow expression.
