## Über die Ausleuchtung von Spektrographen

It will take one too far afield to sketch here the linguistic revolution wrought since the publication of, and partly caused by, Bopp's *Vergleichende Grammatik* 1857 , following Sir William Jones' discovery of Sanskrit. Role of brain in the control of JH esterase activity in *Galleria mellonella* larvae Levinson, A. In the second edition of his Grammar of New Testament Greek English translation by Thackeray, 1905, 2 , Blass sees the dawn of the new day, though his book was first written before it came.

Fukami, Jun-ichi and Toako Usui. Flight behaviour in some anobiid beetles, pp. The outer layer is radially striated 32 WHEELER.

## International Congresses of Entomology

Three case studies highlight the information potential of studying mineral pigments in order to obtain new information not visible by optical means. The accusative is increasingly common with verbs. This space j , seen as a clear spot in surface view, lies at the breach in the envelopes.

## EP0875360A2

The organ stains much less deeply, and even in surface view its expansion may be seen to be due to a flattening of its component cells.

## Journal of Morphology 8 (1893)

Apparently the process is delayed in order that the passage of the embryo through the yolk may be facilitated, for obviously the embryo will move more easily over a prescribed path through a mass of small mobile particles than between large masses formed by the aggregation of such particles. The control of stored product pests by heat, especially high-frequency heating , pp. Variations in the development of the circular fold.

## EP0875360A2

Resent research on the chemistry of *Lasioderma* pheromones.

For this reason I have made the Orthoptera the starting point of my studies, with a view to determining their relations, on the one hand to the Apterygota and on the other to the higher Pterygote orders. Wirtz, Joel Perez and James E. According to the invention, the roughening of plastic surfaces is achieved in that particles are applied to the surface to be roughened in such a way that there are free spaces between particles, that the surface to be roughened is exposed to electromagnetic radiation in areas not covered by particles, and that the surface in those with electromagnetic Radiation-exposed areas is partially removed.
