Lab Procedures and Methods

The lab chemically removes elements from the soil and measures them for their plant availability. Soil with predetermined nutrient levels is tested every 20 samples to provide an accuracy check.

USDA Forest Service

Bridges, homes, and other wooden structures in remote areas can require the time-consuming task of professionals physically traveling to and from the structures for periodic termite infestation inspections.

A Gardener's Guide to Soil Testing

These forests are slow-growing, due in part to limited nutrient- and water-supplying capacities, shallow rooting potentials, and cold temperatures of the soils.

Chemical Analysis and Laboratory

Eventually, he began visiting and observing. There are also two 30 minute parking spots on Mason St. Burned lime or quicklime is very caustic and is rarely used.
