Experimental Investigation of the Internal Flow Field of a Model Gasoline Injector Using Micro

This validation stage is essential for the characterization of turbulent flames as a function of the turbulent flow characteristics. The square channel of the test section As mentioned above, this experimental research works on turbine blade internal cooling technology. Therefore, the total uncertainty of velocity is ± 1 .

Experimental investigation of turbulent flow over live mussels — Experts@Minnesota

Stabilizing and Destabilizing Effects of Coriolis Force on Two-Dimensional Laminar and Turbulent Boundary Layers. Plenty of investigations in rotating ducts have been carried out via different techniques by a variety of researchers in last few decades. Flame normal profiles left: extracted from simultaneous Rayleigh-LIF experiment, right: extracted from simultaneous LIF-CPIV experiment.

Investigation of thermal and airflow conditions near glazed facades using particle image velocimetry and cfd simulation

For the characterization of the fan-induced turbulent flow, a particle image velocimetry PIV setup was built.
