**[PDF] A preliminary note on a revised subdivision and regional correlation of the Otavi Group based on glaciogenic diamictites and associated cap dolostones**

High-angle normal faults produce horsts and grabens basins parallel to the rifting.

**Petrographical and geophysical investigation of the Ecca Group between Fort Beaufort and Grahamstown, in the Eastern Cape Province, South Africa**

Photomicrograph showing: a Metamorphic lithic red arrow in sandstone of the Molteno Formation; b Igneous lithic red arrow in sandstone of the Elliot Formation.

**Geology of South Africa**

Minor amounts come from Rosh Pinah.

**Geology of Namibia**

Journal of African Sciences, 1993, 16, 143-169. The laboratory work was based on treatment and extraction of dinoflagellates cysts from shales samples selected for the study, using the standard palynological method applied in the laboratory of micropaleontology of PETROCI Ivory Coast.

**Fossils Dinoflagellates from the Northern Border of the Douala Sedimentary Sub**

The geology of South Africa. The same sample was placed on the loop that was immersed in the water and the reading was quickly taken and recorded as dM b. The argillaceous rocks are mainly shales interbedded with mudstone and occasionally chert and clay stones which are of future economic significance when considering the large pure clay minerals in the study area.
