## Science Is Giving the Pro

Schuurman, , Proceedings of the 2015 Christian Engineering Conference CEC , Seattle Pacific University, Seattle, WA, June 2015. What if one day a three-dimensional object visited this universe? Research Interests My research interests include Big Data Analytics, evolutionary optimization and learning, Computational Economics, data-driven decision making, and agent-based modeling. At the same time, we understand that there is no method or experiment that science can design that would, or could, disprove the existence of God.

## Are science and Christianity at war?

General Information Biography Christian Haas is an Assistant Professor in the Department of Information Systems and Quantitative Analysis at UNO.

## Dr. Christian Lindensmith

However, most Christians can judge, just from looking at the world around them with all its technological marvels, that science cannot be so simply dismissed. Since support for legal abortion rights is commonly seen as a neutral position in the academy, said Sulmasy, openly pro-life scholars may have a harder time getting their colleagues to take their work seriously. Michael Faraday, James Joule, Lord Kelvin, and James Clerk Maxwell, for example, were all devout Christian believers.

## Christianity and Computing

Do you look to science as your hope, your security, and your safety net? One of the perennial questions in the philosophy of mathematics concerns the status of mathematical truths: Are they human constructions, or are they eternal truths that are embedded in reality? For the holding of these I must bear the ultimate responsibility; it is futile, and I think also ignoble, to hunt for systems and machines which will take that burden from me. Give ways in which Christians can ensure that abortion is put under control. Their attempts to increase knowledge about the world and improve human technology was not part of a dispassionate program to simply learn about the world, but instead to be active in millenarian expectations of Apocalypse.
