### Subalpine Ecosystem

Flowers in tight clusters at the ends of branches, and produces bright red berries favored as a food source by birds and other wildlife. Each flower stem has five white petals, with small, pointed leaves underneath each one.

### SUB

It was my second plant to bloom this year, right after the Hellebores. Leaves are roughly hairy and the basal leaves have a pair of lobes at the base of the blade.

### California sub

Moving it to a spot with afternoon shade remedied the problem. And it's hardiness is a natural for bonsai.

### Subalpine Wildflowers

The cool summer temperatures mean the growing season is very short.
