Committees

EPA also modified the protocol so that samplers collect five one liter bottles which allows for collection of a first liter for copper analysis and a fifth liter for lead analysis, thus reducing the potential need for two separate sampling events. For publicly available inventories that do not include addresses as location identifiers, consumers will be individually notified of their service line material classification under e , after the water system conducts its initial inventory and annually thereafter. They apply in most pre-1978 housing and child-occupied facilities.

Perfluorohexanoic acid toxicity, part II: Application of human health toxicity value for risk characterization

It also tracks how other events, such as changing a water source or treatment affect the water system's compliance requirements for the next year. The magnesium contents of raw, treated, and distributed waters were approximately the same for most samples, exceptions occurring where raw water was softened by treatment.

Summary Report: Drinking Water and Health

The Agency agrees that small water systems serving 10,000 or fewer persons typically do not have the capacity to implement multiple measures simultaneously such as corrosion control treatment and LSLR programs. Statutory Authority EPA is publishing revisions to the LCR under the authority of the Safe Drinking Water Act SDWA , including sections 1412, 1413, 1414, 1417, 1445, and 1450 of the SDWA.

Committees

Whenever a water system conducts partial LSLR, it would be required to notify the affected consumers and follow the risk mitigation procedures in their LSLR plan to ensure that customers are promptly alerted and informed of the actions they can take to reduce their exposure to lead following the partial LSLR, when concentrations of lead in drinking water are expected to be the highest. The Agency agrees that a rolling average construct is appropriate for the final rule. Regarding LSL inventories, States would be required to provide a description of acceptable methods for verifying service line material under this proposal.

Summary Report: Drinking Water and Health

CWS sampling in schools and child care facilities would be part of a targeted public education effort to educate CWS customers about risks from lead in premise plumbing and the actions customers can take to address sources of lead in their plumbing. An assessment of the sources of dietary salt in a British population.
