Graphical Query Designer User Interface

Some Databases, like PostgreSQL, support a shorter CREATE RECURSIVE VIEW format which is internally translated into WITH RECURSIVE coding. The recursive member is union-ed with the anchor member using the operator. ICANN created the to provide advice and guidance as to the operation and development of this critical resource.

Chapter 2 DNS Concepts

An Iterative query is technically simply a normal DNS query that does not request Recursive Services. If it were found it would be returned immediately to the Stub-resolver in an answer message and the transaction would be complete.
