British Columbia Geological Survey

Geology of Germansen Lake Area. Geological Fieldwork 1975: A Summary of Field Activities and Current Research. List of figures ix Fig.

The southern termination of the Western Main Ranges of the Canadian Rockies, near Fort Steele, British Columbia: stratigraphy, structure, and tectonic implications

British Columbia Geological Survey Activities in 2010. They have been generalized for publication.

The southern termination of the Western Main Ranges of the Canadian Rockies, near Fort Steele, British Columbia: stratigraphy, structure, and tectonic implications

Middle Jurassic Stratigraphy Hosting Volcanogenic Massive Sulphide Mineralization in Eastern Bella Coola Map Area, Southwest British Columbia. Sutherland Brown 1968 separated the unit on basis of lithologic differences from other units.

The southern termination of the Western Main Ranges of the Canadian Rockies, near Fort Steele, British Columbia: stratigraphy, structure, and tectonic implications

Previous Geological Work and Mining History: The history of mining activity in the Copper Mountain area is a long one and, since detailed accounts have been published by Camsell 1913, Dolmage 1934, and Rice 1947, only a brief summary will be presented here. These features strongly indicate that hematite, magnetite, pyrite, and molybdenite were all deposited contemporaneously. In: Geological Fieldwork 2001, British Columbia Ministry of Energy and Mines, British Columbia Geological Survey Paper 2002-01, 319-330.
