Wajid Group outcrops in southern Saudi Arabia

Encyclopedia of Paleoclimatology and Ancient Environments.

Publications M. Rappol

The third glacial advance failed to carve a major surface.

Sedimentology and genesis of glacial deposits in the Goudsberg, Central Netherlands

No traces of this system are preserved in the Khusayyayn Formation, but it must have been active to the west and south of the Wajid outcrop belt. It is interpreted as having been deposited at the edge of a glacial lake.

Lithofacies, depositional environments and stratigraphic architecture of the

Composite lithostratigraphic log and succession of lithofacies associations for the Wajid Group, mainly based on outcrops in the northern study area. Mededelingen Werkgroep voor Tertiaire en Kwartaire Geologie 26 2 ; pp.

Small to medium

Blocks floating in the matrix with sizes up to several metres have been observed, which consist of the same material as the matrix they are associated with. One of the models GeoTOP describes the upper 30m of the subsurface in millions of voxels 100 x 100 x 0. In fluid systems, such as moving water or wind, sand is the most easily transported and deposited sediment grain.
