Forest Policy Discussion Document

The system has been criticised for many reasons: that it discriminates against the forestry sector, that field control is inadequate, that the hydrological information used to calculate impacts of water underestimate effects when river flow is low, or in drier areas of the country, that local effects on water resources are not adequately addressed, that the system was applied secretly.

Challenges for modern agriculture

Other relevant options arise in the discussion on the role of government and on social forestry. At the same time, farmers are under pressure to conserve water and use fewer agricultural inputs. Management of woodland and forest resources on communal land. Most woodlands in the rural areas of the former homelands are communally owned.

Silviculture in the United States: An Amazing Period of Change over the Past 30 Years

This needs a deep understanding of the policy options and issues among members of affected communities and constituencies, whether urban or rural. Unions which have been recognised in the industry are the Pulp Paper and Allied Workers Union PPAWU and the new Forest and Farmworkers Association.

Forestry policies and programmes for fuelwood supply in Northern Nigeria

The costs should be shared between the various parties involved and the State. After this, the drafting of a White Paper will begin, with the aim of tabling it in Parliament by the middle of October. The Ministry of Agriculture and Environment in the Eastern Cape then commissioned a scientific investigation to recommend appropriate steps for a solution.

Unpublished Reports and Papers

Non-native, invasive plant species have become a pervasive component of most forested regions of the country, significantly affecting diversity and productivity and increasing costs associated with regeneration activities. Afforestation was mainly with eucalypts, driven by the growing international demand for short-fibre pulp.

Intensive Culture on Northern Forest

The students at the Faculty of Forestry of the University of Stellenbosch an Afrikaans medium university have been predominantly white males but 25% of the first-year students in 1995 are black. They cultivate common groundnuts and bambara nuts between rows of young trees. One forestry company trains about 4 500 employees annually in some 60 courses in silviculture, transport, harvesting, processing and management skills.

Intensive Culture on Northern Forest

In addition, an increasingly aging logging workforce and declines in the number of forestry field staff may limit future opportunities for carrying out silvicultural treatments in many regions.
