## Risk of Suicide

The first wave hit when Chan was 16 years old.

## Mental Health By the Numbers

When Sasha was around 10 or 11 years old, the Menu Courey family went on a trip together.

## Suicide: Suicidal Signs, Behavior, Risk Factors, How to Talk & More

Putting a figure on it like this helps doctors to understand the extent of risk some of their patients face.

## Mental Health, Suicide, and the COVID

Lithium response rates to bipolar disorder have decreased by 50% over the last decade to the point where less than half of people in the acute phase of treatment respond successfully. Paul Soloff of the University of Pittsburgh, in particular, has pioneered several studies that have examined how BPD corresponds to volumes of gray matter in specific parts of the brain associated with impulsivity, aggression, , and episodic.

## Teen Mental Health: Mood Disorders, Alcohol, and Suicide

The rate of those with a binge eating disorder being male. Neurotransmitters are naturally occurring brain chemicals that carry signals to other parts of your brain and body. Men who have bipolar disorder are more likely to be diagnosed with schizophrenia than be accurately diagnosed.

## What Types of Mental Illness May Lead to Suicide?

Sometimes, a mood episode includes symptoms of both mania and depression. They may be family members, close friends, members of a support

group or a counselor at the local drop-in center. Why Do People Attempt Suicide? People of Caucasian descent are 3x more likely to contemplate suicide when compared to people of Hispanic or African American descent when bipolar disorder is diagnosed.

### **Does depression increase the risk for suicide?**

Can you do the same things now? Many mental health professionals are concerned that suicide rates will greatly increase over the next few months related to how Americans are dealing with the devastation of all that is happening. Patients tend to like benzodiazepines and often describe them as the only medications that are helpful; however, benzodiazepines have been shown to worsen behaviors and mood dysregulation.
