## [Reliability of chronic obstructive pulmonary disease diagnosis by primary care physicians and pneumologists in Spain. Predictive factors]

Several recent studies have confirmed high rates of prescribing systemic corticosteroids for patients with acute respiratory tract infections, ranging from 11% of all outpatient respiratory infections in a national study to 70% of patients with at least one week of cough in a small study at two urgent care clinics.

**If You Notice This on Your Fingers or Toes, Have Your Lungs Checked**

Copyright © 2020 by the American Academy of Family Physicians. DISCUSSION Definitions of outpatient care in the PE literature vary considerably. This review summarizes the evidence base for the effectiveness of short-term systemic either oral or injected intramuscularly steroid use in adults in the outpatient primary care setting.

Pulmonology and Lung Disease

Comprehensive outpatient management of low-risk pulmonary embolism: Can primary care do this? The estimated number needed to harm after a short course of steroids was 140 for fracture, 454 for venous thromboembolism, and 1,250 for sepsis.

Short

Primary care physicians comprehensively manage acute pulmonary embolism without higher-level-of-care transfer: A report of two cases.
